Wave Length

The Wave Length Carpet Tile is 50cm x 50cm and is made from a 100% solution dyed nylon 6 composition with the waste from the tile cutting process being shredded and added to the secondary backing, giving it a 10% post-industrial recycled content. Nylon is one of the most popular synthetic fibres for carpet as the non-absorbent properties of nylon means stains and spillages shouldn't soak in. The solution-dyed nylon pre-dyeing process ensures the carpet colour permanently stays in the fibre, making this carpet stand the test of time.

This sustainable carpet tile is made from 50% overall recycled content and benefits from a Green Label Plus Air Quality classification. Available in 11 vibrant colours from light to dark and from thin to thicker lines, our Wave Length Carpet Tile offers a gradient-like barcode effect and is well suited to a wide variety of commercial applications.
